

Slab Leak Detection and Repair

IN THE GREATER FRISCO, PLANO, ALLEN, MCKINNEY, CARROLLTON AREAS

The plumbing in any home, but especially an older home, can run the risk of developing a slab leak in the foundation. Older homes have lived through soil and ground settling, and older water pipes have had years to begin to deteriorate and develop pin-holes or rust. The plumbing in newer homes may not have been initially installed properly.

Don't worry, for Smith and Son Plumbing has years of experience getting to the bottom of any foundation slab leak situation.

We will first utilize our slab leak detection tools to locate exactly where the under the slab leak is occurring. Once we precisely locate the water leak, we will get to work performing the needed repair.

SIGNS OF A POSSIBLE SLAB LEAK

- Feel hot or cold spot on the floor
- New cracks in walls or flooring
- The smell or sight of mold or mildew
- Moisture or water on flooring
- The sound of running water when no water is running
- High water bills for no other reason
