If you suspect a gas leak is in your home, below is what you ought to do:

Proceed with care. If you smell the gas leaking, it may be originating from your stove or hot water heater. Be careful when exploring the origins of the scent. If it is your stove, ensure all burners are off; do not check the pilot light or ignite any other source of flame. If you know how to safely shut off your water heater, do so, however do refrain from doing anything that puts you in immediate threat.

Leave the home. Calmly get every person and animal out of the residence. Hurrying about can knock something over or pull an electric cord in an electrical outlet, causing a

spark. Every person ought to stand well away from the residence, such as nearby or in a next-door neighbor's yard.

Call the utility service provider. The gas company needs to be notified at once whenever there is a severe gas leak. Only they can completely shut down all sources of gas in your home. Once they do so, you will need to wait a while, maybe hours, prior to being able to reentering your residence. If safe, you can try to open up some home windows from the outside to air out the gas faster.

Call us. After the gas company has actually shut off your gas, connect with us to take care of the required repairs.

Installing New Gas Lines

Our professionals can additionally set up completely brand-new gas lines in your home. We would certainly be happy to consult with you concerning exactly how to run gas lines for it.

Remember, gas lines are not ideal Do It Yourself projects. Not only can the gas be dangerous, yet certain building and safety codes should be met. Just certified professionals that know the local codes and laws for gas lines can set up or repair them.
